# WHO IS **STEPHEN HAWKING**?

Stephen Hawking was and is a science sensation for many people all over the planet.

Hawking still lives, here in Cambridge at the age of 75.

He is a British theoretical physicist, who was born on January 8<sup>th</sup>, 1942.

He has a disability, however he is one of the best scientists of modern time! Also, he has released books such as: 'A Brief History of Time'.

# HIS HOME LIFE!

Interestingly, his mother was one of the first graduates of Oxford College. Also, his father, who was an Oxford graduate too, was a medical researcher.

As a child he loved stars and space, as he does today. We know this as he used to lie on the grass with his mum and look at the sky at night.

Stephen was inspired and looked up to his parents ( who where academics ), so unsurprisingly, he became one too.

Surprisingly, he was not the best pupil at school despite this he persevered and loved to learn.

# STEPHEN'S CAREER!

His theories on black holes and the universe, has changed space science.

He dreams big! Stephen believes in time travel, and thinks living on different planets will be possible someday.

Hawking himself, says that his disability made him more determined.

Unfortunately, his condition, over time, has got worse, meaning he can't walk or speak. However, he keeps working on his love for space.
